INSTALLATION

Before you even open Logic, the files must be placed in Logic's official user library.

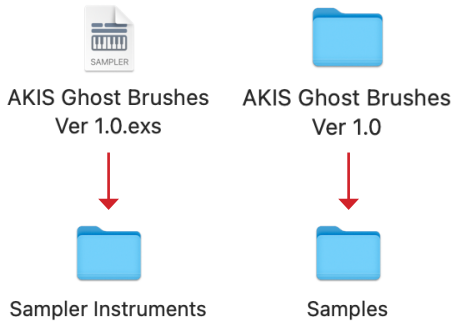

• Open Finder.

• Press the shortcut Cmd + Shift + G (or choose Go > Go to Folder... in the top menu). • Paste exactly this path and press Enter: ~/Music/Audio Music Apps/

Inside this folder, ensure that these two official subfolders exist:
"Sampler Instruments"
"Samples"

• If they do not exist, create them with these exact names (remember the capital letters):
"Sampler Instruments"
"Samples"

PLACE YOUR FILES AS FOLLOWS:

- Put your **AKIS Ghost Brushes Ver 1.0.exs** file directly into the **Sampler Instruments** folder.
- Put the **"AKIS Ghost Brushes Ver 1.0" folder** containing the WAV files into the Samples folder.

LOADING THE SAMPLE INSTRUMENT IN LOGIC:

• Open Logic Pro and your project
• Create a new track: Select Software Instrument
•In the instrument slot (on the audio channel), choose the plugin:
Sampler (Multi-Sample) > Stereo.(Multi-Sample) > Stereo.

- The new Sampler window will open...

At the very top center of the Sampler window, click the dropdown menu
(which says Factory Default by default).
• Navigate all the way to the bottom to User Instruments.

Here, **Ghost Brushes sampler instrument** will now appear on the list.

If necessary, relink the samples via 'Locate' (First time only)

MIDIFILES:

The MIDI files contain the notes and can be dragged directly into the project timeline.
